Who We Are

Pro-Veg Seeds Ltd distributes speciality flowers and vegetable seeds. We also run our own breeding programmes in patio vegetable varieties, broad beans and peas.

Over the 29 years since the company was founded, we have built strong relationships with the UK professional growers, plant raisers and the leading UK packet seed companies. Our more recent international expansion has been driven by the successful products introduced to the market from our own breeding programmes in patio tomatoes and other speciality garden vegetables.

Breeding Programme

We have a keen interest in developing areas of plant breeding that are not well supported by the larger seed companies.

Pro-Veg has a successful breeding programme of ‘patio vegetables’. Our original breeding work was focused on tomatoes, but this has now been extended to cover mini cucumbers and peppers as well.

We now distribute the products of 100 foreign seed companies and sell to the UK, the rest of Europe, Scandinavia, the USA and Canada, Japan, China, South Korea, Southern Africa and the Maghreb Region.

Soham ‘Living’ Catalogue

At a smallholding in Soham, Cambridgeshire, we have our annual ‘Living’ Catalogue demonstration covering a sixth of a hectare. This is opened for viewing in the third week of August each year.

By adjusting the sowing and planting dates, we showcase over 25 different species and 300 different varieties, all in the same week. These varieties are cultivated, either indoors or outdoors, using a range of growing techniques. The demonstrations are made up of our commercial, semi-commercial and new trial varieties.
Capsicum Range

The varieties in this brochure have been carefully selected from our internal and external trials over a number of years.

We screen 26 Chilli Pepper varieties and 26 Sweet Pepper varieties in a polytunnel each year.

NPD Programmes

Pro-Veg runs a continuous series of NPD (New Product Development) programmes. Each year we select trial seed material from between 300 and 500 new lines of flower, field and glasshouse crop types. These are taken from our trial seed stocks. Potential new distributors also contribute their seed lines for our trials.

It is essential to our reputation that Pro-Veg trials all potential new seed lines through a consistent NPD test process. New seed lines developed via breeding programmes carried out under non-UK professional grower conditions and cropping regimes must prove, by passing through every stage of our planned test criteria and trial observations, that they will deliver for our customers under their local growing conditions.

Pro-Veg also provides in-depth technical product support for our speciality lines. Our customers find this service most useful when they are preparing to diversify and enter a new market category. Our product development consultants can assist and advise you on growing regime, cropping density and selection criteria between the new variety sub-types.

We have developed our company business model of always finding and then introducing the most innovative, well adapted and successful seed varieties over many years. Our internal and customer focused NPD trials programme is robust and very well-proven.

We look forward to supporting your speciality seed requirements in the future.
Chilli Pepper
Hot - Patio Types

Gusto Green F1  🍈
This variety has been developed in the UK and shows great promise for a moderate climate and either amateur or professional cropping. Excellent flavour. Good yields of fruit mature from green to red. [39,000 SHU’s].

Gusto Purple F1  🍈
This variety has been developed in the UK and shows great promise for a moderate climate and either amateur or professional cropping. Medium hot type adaptable to a range of growing techniques and tastes. Makes a very ornamental plant as well as producing useful fruit. [29,000 SHU’s].

Patiochilepie F1  🍈
The yield of 25 to 30 fruits are crispy and tasty with a nice heart-shaped appearance and thick flesh. Compact growth habit can be grown in pots and is especially suitable for small gardens.

Autumn Desire F1  🍈
A prolific, classic Asian ‘fine pointed’ hot pepper. Fruits are 1.2 cm in diameter by 9 cm long and weigh around 5g each.

Victoria F1  🍈
An ornamental pepper with small slim, 4 cm, pyramid fruits which ripen from a creamy colour to red. Victoria has a compact growth and can be grown outdoors or for potting and indoor growing. Victoria produces very hot fruits.

Eureka F1  🍈
A compact, bushy, medium height plant, growing to 23-30 cm by 20-30 cm wide with hot oblong horn shape fruit held erect on the plant. Fruit is medium hot with a length of 2.5-4.5 cm and width 0.7-1.1 cm. Colour ranges from the deep purple, orange to red at the same time on the plant.

Emma F1  🍈
An ornamental pepper with a medium to compact plant type, it can be grown both outdoor or indoor. It produces small very hot round 1-1.5 cm diameter fruits, which ripen from yellow green through purple to a bright red colour.

Chilli Pepper Heat Key

- No Heat
- Mild Heat
- Hot
- Very Hot
- Extreme Hot

Tel: +44-(0)1223 499130
Hot Thai
A compact and productive *Capsicum annuum* cultivar which is highly ornamental. The hot chillies are excellent for drying and for chilli powder. One of the best chillies for growing in pots as the plants branch very freely, and naturally develop an attractive shape which displays the ripe chillies to great advantage.

Hot - Low
Aji Delight™
A real rarity, Aji Delight™ is a *Capsicum baccatum* cultivar with a full baccatum flavour, but no heat. The plant is vigorous, easily grown, and produces a huge crop of good size bullet shaped red chillies. The delicious chillies are fairly thick walled and ideal for adding a new flavour to salads or as a garnish to a whole range of dishes. In fact, they can be used with advantage to replace bell peppers in the kitchen.

Midas F1
An exciting new sweet and very mild chilli bred from a cross between a bell pepper and a thick fleshed chilli and combining the best characteristics of both parents. Compact plants fruit early, and carry a huge crop of medium sized peppers with a lovely fresh flavour which is equally suitable for cooking or eating raw.

Trinidad Perfume
A remarkable *Capsicum chinense* cultivar which is with virtually no heat, but has the authentic intense habanero flavour. The plants are compact and productive. Invaluable in the kitchen, used in conjunction with a typical hot habanero, as it allows the cook to control pungency and depth of flavour independently.

Hot - Cherry Bomb
Topik F1
A large cherry type pepper, with round, thick walled, red fruit measuring 3.5 cm in diameter. Fruits are easy to pick.

Papecchia
A very sturdy, productive plant. Early variety with fruits that are round, flattened and 3-4 cm wide. The skin is smooth and green which turns red when the fruits are fully mature. The flesh is thick, hot and can be used for fresh consumption or industrially.
Koral

A hot, cherry shape pepper with early maturity, and a low growing plant. The 2-2.5 cm fruit, with a wall thickness of 2 mm, ripens from dark green to a bright, deep red colour. Koral has excellent quality when harvested from both the green stage and red maturity. Stands adverse weather conditions very well. [25 000-35 000 SHU’s].

Sol De Oro

A vigorous plant with pendulous round fruit that turns from dark green to shiny yellow in colour. Fruit is thick walled and 3.5 cm in diameter with a strong pungency.

Hot - Asian

Damian

Medium early ethnic type of around 9 cm long. Suitable for field or large pot. Colour is green turning to red at maturity.

Kilian

Medium early ethnic type of around 8 cm long. Suitable for field or large pot. Colour is green turning to orange at maturity.

Kristian

Medium early ethnic type of around 8 cm long. Suitable for field or large pot. Colour is green turning to yellow at maturity.

Bandai F1

A vigorous hybrid producing high yields of very pungent short aromatic fruits with smooth walls, sometimes referred to as ‘bird’ or ‘rocket’ pepper. Bandai performs very well in tropical and Mediterranean conditions. It is somewhat late in maturity, but its harvesting season can last up to several months. [IR: Rs].

PVSL 001 F1

A rather compact and dense erect plant habit with medium vigour. The fruits are dark green when immature, turning to deep red when fully mature. Pungency is high. It can be used as a dual-purpose variety. When completely dry, the fruit wall is very smooth and is totally filled with seeds. [IR: Rs].
PVSL 002 F1
A very vigorous variety with a reliable performance in a range of growing circumstances. Plants are tall with a concentrated set of fruits and it is upright fruit bearing. The attraction of PVSL 002 F1 is its fruit quality; firm, medium green turning to a bright red colour at maturity. Fruits are uniform in size and shape, with a high pungency. [IR: Rs].

Birds Eye
This cultivar is Capsicum annum glabriusculum, maturing in 80 to 85 days from sowing. Its 5-8 cm fruits weighing 1.8g to 2.3g are green in colour turning red at maturity. [200,000 SHU's].

Hot - Medium
Starman F1
A small bullet type hot pepper hybrid for the fresh market. Strong, compact, thick stemmed and productive plant with a pendant habit which is easy to harvest. No plant supports are necessary, it produces thick walled glossy, small green fruits turning red when fully matured. Starman F1 has High yield potential.

Flaming Flare F1
This widely adapted Fresno pepper has conical-shaped fruits which are thinned walled 2.54 cm long, and ripen to a bright red. Sweet and mildly hot in flavour. Excellent for fresh use, stir fries, sautéing, and hot sauce. [800-1000 SHU's] [HR: TMV].

Romital F1
Compact early hybrid suitable for both indoor and outdoor production. Medium heat. Very suitable for patio containers.

Jalahot F1
A compact, early hybrid bred for indoor or outdoor production. Fruit is uniform with a weight of 30g, 7.5 cm long with a diameter of 3.5 cm. The thick, shiny, smooth skin is dark green colour ripening to a very bright red. [100,000-150,000 SHU's].

Jalapeno Magnum F1
A fairly strong, extremely high yielding, upright grower bearing fruits of between 10-11 cm x 3 cm with 5 mm walls. Very dark green and attractive, not inclined to make cracked or black fruit.
Japo F1
An early cycle, productive and vigorous plant of the ‘Jalapeño’ type. It is a medium sized pepper, 7 cm x 2 cm with very dark green fruits, turning dark red at ripening. Suited for pot, greenhouse and open field cultivation.

Beibeihong F1
An early maturing, compact hybrid with medium vigour. Beibeihong produces high yields of uniform, thin walled, high pungency fruit measuring 5-6 cm by 0.9-1.1 cm. They are coloured medium green and maturing to bright red. The ‘bullet’ shaped fruit is very firm and held erect on the plant. Long cropping period. [IR: ChiVMV].

Havana Gold
A mild chilli with an outstanding flavour. The plants are easy to grow, with an open growth habit, and produce an abundant crop of rich orange chillies which ripen early in the season. The chillies are crisp, thin fleshed, quite mild and have a rich, complex flavour. Excellent for eating fresh when the flavour can be really appreciated, they also dry extremely well.

Machu Pichu
An exciting new Capsicum chinense cultivar from Peru. Elongated and slightly wrinkled chillies have a rich flavour and a fairly mild to medium pungency. The upright growing plants with dark green chillies maturing to rich chestnut brown and are ideal for growing in containers on the patio where they remain compact and crop early. Grown in the open ground the plants are much larger and very productive, but the chillies ripen fairly late in the season.

Draky F1
An early maturing, hot capia type hybrid with a medium growth habit. Fruit colour is green turning to dark red with a length of 15 cm and wall thickness of 4 mm. Draky is a very high yielding variety for both open field and indoor production. [400-700 SHU’s].

Ohnivec
A productive, mid early maturing chilli pepper with medium levels of growth. The fruit is hot with a pale green colour turning to a dark red. The goat’s horn shape chillis have a length of 16-18 cm and wall thickness of 3.5 mm. Suitable for growing under plastic tunnels and in the open [1,800-2,500 SHU’s].
**Hot - Bhut Jolokia**

**Golden Ghost F1**

Golden Ghost is a hot pepper with a large sized, bush type plant and high yield of smooth, glossy, dark yellow-orange fruit. Although much earlier maturing and more refined than Bhut Jolokia, Golden Ghost shares its fiery pungency but it has a sweeter, more citrus flavour. [1,000,000 SHU's].

**Bhut Jolokia**

The Guinness Book of Records certified Bhut Jolokia in 2007 as the hottest pepper in the world at over 1 million Scoville units. Originally from Assam, India. It has bright red, rough dented fruits, 6-8.5 cm long and 2.5-3 cm wide, thin skin and very hot, fiery flavour. The seed and fruit should be handled with extreme caution. [1,000,000-1,040,000 SHU's].

**Trinidad Scorpion**

A Capsicum chinense cultivar that is among the most piquant peppers in the world. It is derived from the Trinidad scorpion, which is indigenous to Trinidad and Tobago. [Ave: 1,200,000SHU's].

---

**Hot - Habanero**

**Habanero Orange**

Also known as Congo Black, from the Caribbean is one of the hottest and largest of the Habanero family. A unique rich, smoky flavour unlike any other chilli pepper. [425,000-577,000 SHU's].

**Habanero Caribbean Red**

A very hot chilli. Fruit is 4 cm long and 2-3 cm wide ripening from a lime green to a brilliant red with a lovely fruity flavour which makes them ideal for salsas, marinades and in hot sauces. [300,000-475,000 SHU's].

**Habanero Yellow**

With a plant height of 75 cm producing a high yield. Fruits are green and yellow to red maturing to reddish-purple, approximately 2-6 cm long and 2-6 cm in diameter. [100,000-350,000 SHU's].

Sweet Pepper
**Sweet **- **Patio Types**

**Hamik**
A very tasty snack pepper suitable for both indoor and outdoor production. The variety has mid late maturity and medium vigour. The 30-40g fruits are very sweet and almost seedless. We recommend harvesting this variety when fully orange for maximum appeal.

**Patiostype F1**
This variety has strong vigour and is very suitable for continuous harvesting. It produces 25 to 30 attractive small fruits per plant, which are crispy and tasty with a nice appearance and thick flesh. These peppers can be eaten fresh, grilled, stir-fried or stuffed.

**Sweethot F1**
A medium strong plant, which produces exceptional yields of mildly pungent 12 cm x 3 cm fruits with 5 mm walls. With its 11.0% Brix the flavour is really delicious. The fruits should be harvested when dark red. The pungency varies with the growing conditions and is absent on occasions.

**Jimmy Nardello’s**
A super sweet and flavourful pepper, its fruits are long and thin. It is an Italian heirloom brought to America in the 1880’s by the Nardello family. It is very productive with heavy sets of 25-30 cm long peppers. The fruits can be used green or red. Flesh is medium thick, excellent for slicing into salads or sautéing with onions or potatoes. Extremely versatile, freezes and dries well.

**Sweet - Long**

**Thor F1**
A tall, vigorous hybrid of medium late maturity. The fruits are 28-30 cm long narrow and triangular in shape with 4-5 mm walls. At maturity fruits are very sweet and the colour from dark green to bright red.

**Red Kiss F1**
Bright red hybrid In the Kiss range, with its tasty flesh and the small amount of seeds making it an increasingly popular variety.
Yellow Kiss F1
A bright yellow hybrid in the Marconi – Bullhorn class. Fruits have thick flesh and a 9-10% Brix giving a great sweet taste and full flavour. The long fruited types have more tasty flesh and less seeds inside the fruits.

Orange Kiss F1
A bright orange hybrid in the Marconi – Bullhorn class. Fruits have thick flesh and a 9-10% Brix giving a great sweet taste and full flavour. The long fruited types have more tasty flesh and less seeds inside the fruits.

Tastybite Amber F1
A variety that matures early and produces thick fleshed very sweet peppers that are a midi sized, conical shape, 15-16 cm long with a yellow skin colour. Good for stuffing or eating fresh off the plant.

Tastybite Peach F1
A variety that matures early and produces thick fleshed very sweet peppers that are a midi sized, conical shape, 14-15 cm long with a peachy orange skin colour. Good for stuffing or eating fresh

Tastybite Ruby F1
A variety that matures early and produces thick fleshed very sweet peppers that are a midi sized, conical shape, 14-15 cm long with red skin colour. Good for stuffing or eating fresh off the plant.

Astor F1
A tall and vigorous plant and medium late maturity. Sweet fruit is long, up to 28-30 cm, and a narrow triangular shape with walls 6-7 mm thick. Dark green to bright yellow at maturity.

Black Knight F1
A very early and productive variety, fruits are narrow triangular shape, 25 cm long with a deliciously sweet flavor. Colour is a satiny, purple-black maturing to red.

Ostry F1
A very early, mildly hot sweet pepper, selected for open field production with medium vigour. The uniform, 4 cm thick-walled, pyramid shaped fruits that are 13 cm long and ripen from a light green to a red colour.
**Sweet – Blocky**

**Kvadry F1**
A medium vigour variety that has proved to be suitable both for indoor and outdoor production. We recommend harvesting the 6 mm thick walled fruit in a creamy white colour when fruit weight will be 110-130g. This is a high quality, high yielding and stress tolerant variety.

**Oregon F1**
Suitable for growing either outdoors or under protection. It produces 300-350g fruit, with a blocky shape and approximately 15 cm long. At maturity it is a very attractive deep orange colour.

**Blockbuster**
An attractive variety, with 15 cm long green fruits turning vivid red at maturity. They can be used in fresh salsas, salads and for stuffing. The variety is suitable for growing in containers, although fruits may be smaller when grown in this system.

**Sweet Chocolate F1**
Plants are early maturing and very productive. It is a very tasty pepper for indoor and outdoor production, tolerating cool nights. Elongated blocky fruits are thick fleshed, medium sized, ripening from green to chocolate on the outside and bright red inside. Suitable for salads and barbecues.

**Gelby F1**
With a vigorous medium sized plant habit. It is well suited to all forms of protected cropping. Producing a large number of bright creamy-white to yellow sweet fruits over a long period. These fruits are 6-8 cm long and 3-4 cm wide, with an approximate weight of 10g.

**Saskia F1**
Is a four lobed blocky sweet pepper, apple green to deep red at maturity. Suited to indoor or outdoor production. It is high yielding with cracking tolerance.
**Sweet - Mini Blocky**

**Sweetonia Chocolate**  
Is a very sweet, tasty snack pepper which is suitable for both indoor and outdoor production, the fruit ripens from green to chocolate and are 35-45g in weight. The plants have a mid-late maturity and a medium vigour.

**Sweetonia Orange**  
Is a sweet, tasty snack pepper which is suitable for both indoor and outdoor production, the fruit ripens from green to orange and are 30-40g in weight. The plants have a mid-late maturity and a medium vigour.

**Sweetonia Red**  
Is a very sweet, tasty snack pepper which is suitable for both indoor and outdoor production, the fruit ripens from green to red and are 30-40g in weight. The plants have a mid-late maturity and a medium vigour.

---

**Habanada**  
Bred by Dr. Michael Mazourek of Cornell University, Habanada is a new extremely productive and early heatless ‘habanero’ type, with an irresistible tropical flavour. It can be used for chopping at the immature green stage, but they are best eaten when they turn fully orange. Fruits are excellent when seared, braised, roasted or eaten raw.

**Sweet - Tomato**

**Gogorez F1**  
Is an Indeterminate tomato-shaped pepper hybrid, with hanging, large fruits. The fruit have thick walls and are approximately 4-6 cm long and 9-12 cm wide, with fruit weights of up to 300g.

**Tamina F1**  
Is an early variety producing attractive tomato shaped fruit, weighing approximately 100g. It matures from green to a dark red colour.
